WORK EXPERIENCE (4)

Dec 2021 - Aug 2022

QA & Software Engineer at BigID

I joined as a QA Engineer to Connectors team but continued as a Software Engineer. I've worked at startup so I am use to wearing many hats. I worked according to Scrum technique with daily syncs. Our team followed to two-weeks sprints

- Developed tool for rebasing process (daily routine) on Bash
- Review and light fixing of connectors / Java (Maven)
- I did bugfixing and developed new features on React / TypeScript
- Developed and fixed e2e tests on Cypress
- Worked with Jenkins / Blue Ocean / Allure

Jul 2019 - Dec 2021

Test Engineer at Silicom Ltd.

This role is very multifaceted and involves interaction with hardware and software.

- Worked with a lot of bash scripts and writing new and rewriting old ones
- Analyzed new hardware stuff and preparing to implement QA testing
- Created ATPs and manuals
- Interacted with R&D engineers and worked along side with them
- Experience in writing scripts and test documents STD, STP, STR
- Familiarity with testing methodologies

Jan 2017 - Aug 2018

Systems Analyst at Compulsory Medical Insurance Fund of Russia

I was involved in supporting and developing the existing information system for planned hospitalization in St. Petersburg. In the project I used PostgreSQL, jQuery, Camunda BPMN. Initially I came to the position of System Analyst, but soon I moved to the development department as I saw a lot of defects.

- Analyzed the existing system of the hospitalization program
- Administrated PostgreSQL Databases and maintained server which one based on Debian OS
- Created DBMS PostgreSQL from open-source kernel
- Ensured the performance and fault tolerance of the information system with more than 7,500 users
- Implemented of new business processes
- Communicated with developers and wrote specifications
- Embedded JasperReports for Camunda BPMN
- Created automation tests by using Selenium and Python
- Ensuring the performance and fault tolerance of the information system with more than 7,500 users
- Created DBMS PostgreSQL from open-source kernel

Apr 2016 - Dec 2016

Systems Analyst at State Unitary Enterprise “St. Petersburg Information and Analytical Center”

I was in the analytics department as a systems analyst. My task was to analyze existing business processes and prepare interface prototypes.

- Prototyped UI/UX for existing and future features using best practices and guidelines by Apple and Google
- Implemented his development of the transfer of old public services to a new portal of public services in St.-Petersburg
- Wrote and prepared technical documentation for the IDEF0 development department in the UML notation

Top 5 at Hackorona supported by Microsoft

KEEPSTANCE is a project from the hackathon 'hackorona', which was supported by Microsoft and the in.dev community. The event was attended by 1400+ participants and about 60 teams. We made it in 5 days to the top 5. <a target='_blank' href='https://hackorona.in.dev/projects'>Hackorona Web Page</a>
(Team 14)

 Our solution is to use Bluetooth Low Energy technology to measure the distance between you and another person. With its help our measurements are precise and Bluetooth LE, as the name hints, has low energy requirements. So no problem with battery draining.

KEEPSTANCE SDK is a perfect drop-in solution for businesses and service providers.

KEEPSTANCE APP is cross-platform app uses KEEPSTANCE SDK & reduces the amount of closed contacts between people. As an additional way of measurements KEEPSTANCE will use Data over Sound technology, which enables the exchange of data between any devices with a pre-existing loudspeaker or microphone through sound waves.
